

## HW Series

### UPPER AIR UVC FIXTURES

Upper-air UVC fixtures are engineered to provide very targeted airborne pathogen reduction into high-risk areas.

The HW series is for use in hallways, corridors and other spaces. The louvered design of this series allows for the upper air-field of UV above the heads of the occupants, allowing for effective pathogen mitigation while maintaining CDC/NIOSH upper-air guidelines. Benefits include:

- Accommodates spaces such as hallways, where wall mounting is preferred, and the ceiling height is lower.
- Provides targeted airborne pathogen reduction.
- This unit covers up to 220 sq. ft.
- Does not produce ozone or harmful volatile organic compounds (VOC).

#### Models

The HW-218 includes 2 Philips PL-L 18W UV lamps and provides a 180° light field. This model should be spaced 20' apart in corridors.

This unit is ideal for high-risk spaces that may have higher pathogen concentration.

Provides targeted pathogen reduction in spaces where the ceiling height is lower.

Creates repeated air disinfection within defined spaces, through natural convection-currents.

Neutralizes and eliminates the infectious airborne pathogens that cause respiratory illness and disease.
